is entrainment of internal circadian clocks [2, 6-10], which permits organisms to synchronize to environmental time, allowing physiological functions to occur at optimal times of day [1]. Natural selection favored the human circadian clock system to promote energy intake and metabolism, physical

Entrainment of the Human Circadian Clock to the Natural

Circadian Clock In humans (and other mammals), a circadian clock is located in the suprachiasmatic nuclei (SCN). The SCN is in the hypothalamus. It is a tiny cluster of about 10 thousand nerve cells. This circadian clock is synchronized to the external cycles of light and darkness and social contact.

Human Germline Mutation and the Erratic Evolutionary Clock ... One of the most fundamental discoveries in evolutionary biology is the molecular clock: the observation that changes to the genome along an evolutionary lineage accumulate steadily with time [1-3] and the subsequent development of a theory the Neutral Theory that ...

Chronobiology is a field of biology that examines periodic (cyclic) phenomena in living organisms and their adaptation to solar- and lunar-related rhythms. These cycles are known as biological rhythms. Chronobiology comes from the ancient Greek χρόνος (chrónos, meaning "time"), and biology, which pertains to the study, or science, of life.

Experimental data from the plant and animal kingdoms have led to many models and concepts related to biological clocks that help describe and understand the mechanisms of these changes. Many of the prevailing concepts apply to all organisms, but most of the experimental data are insufficient to explain the dynamics of human biological clocks.

Chronobiology is the biology of time and internal biological clocks. Biological clocks range from oscillations found in nerve cells on the millisecond scale to oscillations in minutes, hours, days, and years.
