calculus, including an introduction to multiple integrals. In order to cover Chapter 11, which contains material on Markov chains, some knowledge of matrix theory is necessary. The text can also be used in a discrete probability course. The material has been organized in such a way that the discrete and continuous probability discussions are presented in a separate, but parallel, manner.

Why is Probability Theory better? de Finetti: Because if you do not reason according to Probability Theory, you can be made to act irrationally. Probability Theory is key to the study of action and communication: { Decision Theory combines Probability Theory with Utility Theory. { Information Theory is the logarithm of Probability Theory".

Solution to Problem 1.14. (a) Each possible outcome has probability $1/36$. There are 6 possible outcomes that are doubles, so the probability of doubles is $6/36 = 1/6$. (b) The conditioning event (sum is 4 or less) consists of the 6 outcomes $(1;1);(1;2);(1;3);(2;1);(2;2);(3;1)$; 2 of which are doubles, so the conditional probability of doubles is $2/6 = 1/3$.

of probability is useful in a broad variety of contexts, including some where the assumed probabilities only reflect subjective beliefs. There is a large body of successful applications in science, engineering, medicine, management, etc., and on the basis of this empirical evidence, probability theory is an extremely useful tool.
