Similarly to the previous ERCIM WG workshops we plan several plenary lectures and specialized sessions devoted to different topics from both computational statistics and numerical methods as, e.g., Numerical Methods for Statisticians, Total Least Squares, Partial Least Squares and Markov Chains Computations.

Numerical and Statistical Methods for the Coarse-Graining

Indeed, the reason for the importance of the numerical methods that are the main subject of this chapter is precisely that most equations that arise in real" problems are quite intractable by analytical means, so the computer is the only hope.

problems for which analytical solutions are known, one must resort to numerical methods. In this situation it turns out that the numerical methods for each type of problem, IVP or BVP, are quite different and require separate treatment. In this chapter we discuss IVPs, leaving BVPs to Chapters 2 and 3.
