Study Tips 1. Read the suggested readings before coming to class and record the main ideas. 2. After each lecture, summarize the major ideas and concepts in your notes within 24 hours of class. 3. Annotate these summaries from your study of the textbook 4. Work the problems independently 5. Master the material from each lecture before going to the next one.

Inspiring and motivating students from the moment it published, Organic Chemistry has established itself in just one edition as the student's choice of an organic chemistry text. The second edition refines and refocuses Organic Chemistry to produce a text that is even more student-friendly, coherent, and logical in its presentation than before. Like the first, the second edition is built on ...

In chemistry, an organic compound is generally any chemical compound that contains carbon. Due to carbon's ability to catenate (form chains with other carbon atoms), millions of organic compounds are known. Study of the properties and synthesis of organic compounds is the discipline known as organic chemistry. For historical reasons, a few classes of carbon-containing compounds (e.g., carbonates ...

Organic reactions are chemical reactions involving organic compounds. The basic organic chemistry reaction types are addition reactions, elimination reactions, substitution reactions, pericyclic reactions, rearrangement reactions, photochemical reactions and redox reactions. In organic synthesis, organic reactions are used in

the construction of new organic molecules.

Deactivating Substituents []. A deactivating group is a functional group attached to a benzene molecule that removes electron density from the benzene ring, making electrophilic aromatic substitution reactions slower and more difficult than they would be on benzene alone.

Notes and Handouts from earlier year: These notes are organized by chapter rather than test, and also have subtopics broken down. Most are identical or similar to what this year's notes have, but at times there will be changes in this year's notes, so the matchup will often be close/similar but not always exact.
