The integrated high power systems make the application even easier and more robust. New examples in laser material processing and pumping of solid state lasers are presented. 1. INTRODUCTION High power VCSEL systems have been successfully demonstrated in applications for thermal treatment in manufacturing [1].

In this report we present some initial ideas about possible uses of the principally new advanced sensor technology based on the photoelectric structures with memory (PESM) in intelligent vehicle highway systems (IVHS). PESM is an integral multilayer solid-state device capable of registering, storing, converting, and processing of images.
