Quantum Creation Does The Supernatural Lurk In The Fourth

the creation mechanism is assumed to be driven by quantum effects that are more probable only over small scales, but since notions of time and energy are only properties within our universe it isn't clear whether quantum mechanics constrains the initial creation in such a way. 2 Inflation starting from inception

Quantum creation and inflationary universes: a critical

Quantum science doesn't have to be hard to understand or boring. I make it come ALIVE and show you how science points to the Creator!! It is exhilarating. Come join in and learn how God works within His creation like you've never heard before. I simplify the complex world of physics so you will be able to understand how evident God is in science.

sidered above. The probability of quantum creation of a closed inflationary universe is finite. After its creation it inflates and becomes flat and practically infinite. In the scenario described above, it unceasingly produces more and more bubbles, each of which represents a new infinite open universe. Thus, in this scenario one does not en-

analogous to quantum decay of an atom. To overcome the limitation of only having closed models quantum creation of bubbles during any subsequent inflationary phase can enable locally open regions to form [8]. The use of these so-called Hawking-Turok instantons [9] are essentially making use of the fact that in DeSitter space all curvatures are equivalent.
