Given only the mean and standard deviation of noise, the Kalman filter is the best linear estimator. Non-linear estimators may be better. Why is Kalman Filtering so popular? • Good results in practice due to optimality and structure. • Convenient form for online real time processing. • Easy to formulate and implement given a basic understanding.

The Kalman filter allows one to make estimates of the launcher location and estimate the accuracy of these estimates. The Kalman filter makes optimal use of the target measurements by adjusting the filter weights  $g_n$  and  $h_n$  to take into account the accuracy of the  $n$ th measurement.

While the Kalman filter has been around for about 30 years, it (and related optimal estimators) have recently started popping up in a wide variety of computer graphics applications.
